

DECEMBER 2021, 3rd PRESS RELEASE

FARCROSS 5th PLENARY MEETING

FARCROSS partners met online on the 22nd of November 2021 to discuss the project's status and progress. Administrative, technical, and dissemination and exploitation sessions were all on the program. Members of the consortium discussed their accomplishments and decided on the next actions.

2 NEW PUBLICATIONS

Dissemination efforts continue without any break! Our partners again were very productive resulting in two publications. The first one, [Dynamic Line Rating—An Effective Method to Increase the Safety of Power Lines](#), aims at offering a new, economical expert system based on dynamic line rating (DLR) that utilizes the potential of real-time power line monitoring methods. The second one, [Laboratory-Scaled DEMO possibilities for testing WAMPAC solutions before field implementation](#), presents the capabilities of a Wide-Area Protection and Control (WAMPAC) lab-scale demonstration (DEMO).

Transformational Power Flow Control Technology Unlocks Cross-Border Electricity Capacity in Southeastern Europe

A transformational grid enhancing technology, SmartValve™, has been successfully commissioned in Greece, marking the second deployment of power flow control technology by IPTO. By intelligently controlling the flows of power across the network, this technology can unlock available cross border interconnection capacity between Greece and Bulgaria.
